Manufacturing: Precision Manufacturing Services

Speed, Flexibility and Traceability

We design, engineer, prototype, test, and build with every detail and regulation in mind from day one. As part of our process, Enercon conducts a proprietary three-phase Production Readiness Review—covering design for manufacturing, flow optimization, and quality/yield targets. This ensures a seamless transition to production, enabling custom precision manufacturing processes that boost performance, improve quality, and reduce total cost.

Integration is everything.

Manufacturing Execution System (MES)

Enercon's MES platform ensures full factory visibility and control with lot-tracked materials, real-time paperless work instructions, and software-enforced routing. Touchscreen workstations and eDHR process history enable consistent execution and complete traceability—delivering compliance and risk management without added cost.
